

ALERT ID	SOURCE SYSTEM	ALERT TIME	ANALYST
CLD-0102	Endpoint Protection (Defender AV)	2026-09-01 02:45:33	Eshak Basta

ALERT (WHAT FIRED, ON WHOM OR WHAT):

- Trojan:Win32/Stealgen.B was detected on LDN-WS-117 assigned to liam.doyle@cloudora.io. The malware was detected four times, and quarantine failed during each attempt

HYPOTHESIS (BOTH DIRECTIONS):

- Malicious: an active credential-stealing malware infection is present on the endpoint.
- Benign: a false detection or an already-remediated threat triggered a stale alert.

EVIDENCE CHECKED:

- Defender AV detection logs showed four detections between 02:13 and 02:41 UTC. Quarantine failed each time, and the malicious file continued to reappear in C:\Users\liam.doyle\AppData\Roaming\WinSyncSvc\wsync.exe. The detection log also showed a second file, wsync_upd.exe, appearing in the same folder.

VERDICT:

True positive	False positive	Duplicate	Escalate	Insufficient data
---------------	----------------	-----------	----------	-------------------

SEVERITY:

- Sev 2
- The reported severity was High and remained Sev 2 because an active credential-stealing malware infection was confirmed on a single host

ACTION:

- Isolated LDN-WS-117 through endpoint management.

- Raised an eradication and reimaging incident.
- Reset Liam Doyle's password as a precaution.
- Revoked all active sessions.
- Monitored the account for anomalous sign-in activity for 72 hours.

JUSTIFICATION:

- Repeated quarantine failures and file regeneration confirmed an active malware infection.

MITRE ATT&CK:

- T1003 – OS Credential Dumping (suspected credential theft).
