## ALERT (WHAT FIRED, ON WHOM OR WHAT):

- The rule "**Repeated authentication failures (service account)**" fired after 18 failed sign-ins for svc-backup@cloudora.io between 23:41 and 00:03 UTC, followed by a successful sign-in at 00:14 UTC.

## HYPOTHESIS (BOTH DIRECTIONS):

- Malicious: an attacker is attempting to brute-force a service account.
- Benign: the failed authentications are the result of the scheduled backup credential rotation.

## EVIDENCE CHECKED:

- The shift handover documented **CHG-2088**, which scheduled a backup credential rotation between 23:00 and 02:30 UTC. The sign-in evidence showed 18 failed authentications from LDN-SRV-BK1, followed by a successful sign-in from the same host.

## VERDICT:

|               |                |           |          |                   |
|---------------|----------------|-----------|----------|-------------------|
| True positive | False positive | Duplicate | Escalate | Insufficient data |
|---------------|----------------|-----------|----------|-------------------|

## SEVERITY:

- Informational
- The alert was originally classified as **High** but was re-rated to **Informational** because the activity matched an approved maintenance window.

## ACTION:

- Closed the alert and referenced **CHG-2088**. Recommended suppressing service account authentication failures during approved maintenance windows.

## JUSTIFICATION:

- The source, timing, and successful authentication matched the approved credential rotation.

## MITRE ATT&amp;CK:

- None. False positives do not receive a MITRE technique.
