

ALERT ID	SOURCE SYSTEM	ALERT TIME	ANALYST
CLD-0107	SharePoint Activity Monitoring	2026-09-01 03:20 UTC	Eshak Basta

ALERT (WHAT FIRED, ON WHOM OR WHAT):

- The Mass deletion by a single user rule fired after 1,240 files were deleted from the HR-Records-Archive SharePoint site in the Leavers-2019 folder between 03:00 and 03:20 UTC under the account tara.kemp@cloudora.io.

HYPOTHESIS (BOTH DIRECTIONS):

- Malicious: A compromised account deleted a large number of HR records.
- Benign: An approved retention workflow automatically removed archived files.

EVIDENCE CHECKED:

- SharePoint activity logs showed that the deletions were initiated by the HR - RetentionFlow process. Activity records identified the initiating process as a scheduled automation rather than an interactive user session. I also reviewed Tara Kemp's sign-in activity in Entra ID and found that it matched her normal baseline behavior, with no indicators of account compromise.

VERDICT:

True positive	False positive	Duplicate	Escalate	Insufficient data
---------------	----------------	-----------	----------	-------------------

SEVERITY:

- Informational
- The alert was originally reported as medium severity but was re-rated to informational because the activity was consistent with an approved retention workflow and no evidence of account compromise was identified.

ACTION:

- Closed the alert and recommended creating an exception for approved retention workflows to reduce future false positives.

JUSTIFICATION:

- The file deletions were initiated by the scheduled HR-RetentionFlow automation, and the user's sign-in activity matched normal baseline behavior.

MITRE ATT&CK:

- None
